PROFILE

Backend-leaning full-stack developer (NestJS, PostgreSQL, AWS, Terraform, React/TypeScript) building payment flows, subscription billing and integrations for production platforms. Shipped Stripe billing with idempotent webhooks, a state-machine payment service and a PCI DSS-compliant insurance module for a DKK 280M+ car marketplace; also ship OpenAI-powered features. English B2, completing an MSc in Cybersecurity.

SKILLS

Backend — NestJS, Node.js, TypeORM, Prisma, PostgreSQL, REST APIs, OpenAPI/Swagger, Passport.js, JWT

Frontend — React, TypeScript, Zustand, React Hook Form, Zod, Tailwind CSS, MUI, Ant Design, Styled Components, React Router, TanStack Query, Vite, Recharts, dnd-kit

Cloud & DevOps — AWS (SQS, Lambda), Terraform, Docker, GitHub Actions, CI/CD, Sentry

Integrations — Stripe, Safepay, OpenAI API, Pipedrive CRM, Twilio, SendGrid, Mailgun, Slack API, Uppy/S3

Testing & Tooling — Jest, Vitest, Git, Nx monorepo, AI-assisted development (Claude Code)

PROFESSIONAL EXPERIENCE

SoftKit 07/2025 – Present

FULL-STACK DEVELOPER

Gogeta — UK employee-benefits platform (B Corp, ISO 27001); employees save up to 40% on bikes and up to 35% on nursery fees via salary sacrifice · NestJS, TypeORM, PostgreSQL, AWS SQS, React, TypeScript

- Automated funding-deadline enforcement: an SQS-driven job pauses applications when allocations close, with auditable pause history and admin/parent notifications — saving the ops team ~5 hours/week of manual checks
- Audited and fixed all 63 Mailgun transactional templates (tracking links and pixels removed, one sender domain), lifting inbox placement by ~15%; email normalization cut duplicate-account support tickets by ~90%
- Shipped filtered background CSV exports handling 10k+ records without UI timeouts; moved the Bike portal to design-system tokens with shared MFA components

Aksel — Danish private used-car marketplace (1,700+ cars, DKK 280M+ transacted in its second year) · NestJS, Stripe, Safepay, Terraform, React

- Rebuilt the core vehicle sales flow behind DKK 280M+ in deals: Safepay v2 migration, state-machine payment service supporting 3 payment modes and zero-downtime v1→v2 rollout, reducing stuck/failed payments by ~30%
- Launched a new revenue line from scratch — PCI DSS-compliant car insurance module, attached to ~15% of sales — and built Stripe billing (subscriptions, promo codes, refunds, idempotent webhooks), automating ~80% of manual invoicing
- Connected 7 external services (Pipedrive, Twilio, Spamhaus, IPQS, Slack, Stripe, Safepay); moved ownership monitoring, debt checks and auto-delisting into background jobs, cutting API response times by ~40%
- Introduced unit testing (Vitest) into CI/CD and upgraded Node.js 20→24 with Terraform, closing 20+ known CVEs

VISO 2024 – 2025 | Lviv, Ukraine

FULL-STACK DEVELOPER

- **Teach Aid** — AI collaboration platform for teachers and students: OpenAI-based assignment generation with structured output parsing and fallbacks, cutting assignment prep from ~30 min to under 5; NestJS auth (JWT, refresh tokens, Google OAuth), RBAC and multi-school/class management on Prisma + PostgreSQL
- **Tripami** — travel journaling & community platform: responsive web app with auth, photo/video upload pipeline, recommendations and social features

EDUCATION

Master's Degree in Cybersecurity 09/2024 – present | Ternopil, Ukraine
Ternopil Ivan Puluj National Technical University

Bachelor's Degree in Cybersecurity 09/2022 – 07/2024 | Ternopil, Ukraine
Ternopil Ivan Puluj National Technical University

Junior Specialist Computer Engineering 09/2015 – 07/2020 | Ternopil, Ukraine
Technical College of Ternopil Ivan Puluj National Technical University
